This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

A NEW WORK FOR SCHOOLS.

WHITE'S UNIVERSAL HISTORY.

LEA AND BLANCHARD

HAVE LATELY PUBLISHED,

ELEMENTS OF UNIVERSAL HISTORY,

ON A NEW AND SYSTEMATIC PLAN;

FROM

THE EARLIEST TIMES TO THE TREATY OF VIENNA;

TO WHICH IS ADDED,

A SUMMARY OF THE LEADING EVENTS SINCE THAT PERIOD,

FOR THE

USE OF SCHOOLS AND PRIVATE STUDENTS.

BY H. WHITE, B.A.,

TRINITY COLLEGE, CAMBRIDGE;

WITH ADDITIONS AND QUESTIONS,

BY JOHN S. HART, A.M.,

PRINCIPAL OF THE PHILADELPHIA HIGH SCHOOL, AND PROFESSOR OF MORAL AND MENTAL SCIENCE, ETC., ETC.

In one Volume, large Duodecimo, neatly bound in Maroon.

The Publishers, in presenting "*White's Universal History*" to the public, believe that it is calculated to fill a deficiency, long existing in school-books, of a good and an accurate condensed manual of the History of the World, fitted as an essentially appropriate work for schools. Some of those now in use have been long before the public, and since their appearance, many interesting investigations have been made, and important facts developed; some are meagre in their details, and the narrations given are proved by later researches to be incorrect; while none embrace a broad and philosophical view of the gatherings of late historians.

It is believed that the present volume is capable of fulfilling these indications. The Author, who has had great experience as a teacher of history, has spent several years in the composition of the work; and every effort has been made to insure its accuracy during its passage through the press. In his Preface, he remarks that "he has consulted the best works in the English language, and acknowledges his great obligations to several of the more recent French and German writers. The references introduced in the body of the work, serve to indicate the main sources from which his information has been derived; and it is hoped they will also be serviceable to the student, by directing the course of his further researches, as well as inducing him to continue them in a more extended field."

WHITE'S UNIVERSAL HISTORY.

The work is divided into three parts, corresponding with Ancient, Middle, and Modern History; which parts are again subdivided into centuries, so that the various events are presented in the order of time, while it is so arranged that the annals of each country can be read consecutively, thus combining the advantages of both the plans hitherto pursued in works of this kind. To guide the researches of the student, there will be found numerous synoptical tables, with remarks and sketches of literature, antiquities, and manners, at the great chronological epochs.

As to the method to be adopted in using this manual, "the compiler deems it unnecessary to offer any lengthened directions; the experienced teacher will readily adopt that best suited to those under his charge. The work may be used simply as a reading-book; but a certain portion should be given out for the attentive study of the pupil, after which he should be closely questioned, not only as to the more general facts, but also the most trivial circumstances recorded." To facilitate this exercise on the part of the teacher, the American Editor, Mr. J. S. Hart, has added a series of Questions, which will be found very useful to those who prefer this mode of instruction.

In preparing this edition, the American Editor has paid particular attention to those portions of the work which treat of American History, making them more full, and correcting those mistakes which are inevitable in one residing at such a distance from the source of information. His extended and well-earned reputation as a teacher, is a sufficient guarantee that whatever has passed under his revision will be free from all errors of importance.

In conclusion, the publishers have to observe, that during the short time in which this work has been before the public, it has received the most flattering testimonials of approbation. Already it has been introduced into many of the highest class of institutions for instruction, and three editions have been called for in less than a year.

A few recommendations and notices are subjoined.

Messrs. Lea & Blanchard:

GENTLEMEN—I return the volume of "Elements of Universal History" you left with me a few days since. On a cursory examination, it appears to me to be much the best of the elementary works on the subject which I have met with. The author has executed his method with a great deal of skill, and by this means has avoided much of the confusion which is apt to occur in manuals of Universal History. The book is a very comprehensive one, and must have cost Mr. White great labor in collating, and still more in arranging his materials. He shows, moreover, a direct acquaintance with many of the best historical authorities, among them, those of late years. I have turned to several periods of history which I thought would be most likely to show its character, and find them treated with considerable fairness and accuracy; indeed, it is unusually free from the prejudices that often disfigure books of this sort—I mean on questions of history.

The book is one that might, I am inclined to think, be introduced with advantage as an historical text-book for the younger classes in our colleges. It will be found, too, I believe, a convenient manual for private students, which is one of the uses contemplated by the author. Let me add that, judging from the passages I have looked at, the book is written in good, unaffected English.

Truly and respectfully,

HENRY REED,

Professor of Belles Lettres in the University of Pennsylvania.

PREFATORY NOTE

TO THE

INDEX OF DR. BUTLER'S ANTIENT ATLAS.

It is to be observed in this Index, which is made for the sake of complete and easy reference to the Maps, that the Latitude and Longitude of Rivers, and names of Countries, are given from the points where their names happen to be written in the Map, and not from any remarkable point, such as their source or embouchure. The same River, Mountain, or City, &c., occurs in different Maps, but is only mentioned once in the Index, except very large Rivers, the names of which are sometimes repeated in the Maps of the different countries to which they belong.

The *quantity* of the places mentioned has been ascertained, as far as was in the Author's power, with great labor, by reference to the actual authorities, either Greek prose writers, (who often, by the help of a long vowel, a diphthong, or even an accent, afford a clue to this,) or to the Greek and Latin poets, without at all trusting to the attempts at marking the quantity in more recent works, experience having shown that they are extremely erroneous.

The Author does not flatter himself that he has altogether succeeded in this extremely difficult point, though he has taken great pains with it. In some instances, where there are no means of ascertaining the quantity by poetic usage, custom, derivation, or any authentic source, and in cases where the syllable is known to be common, or is obviously long, the quantity is not marked.

It is certain that the Antients in very many cases had no settled rules for the quantity of proper names. Even in the very best writers we have singular anomalies in the most common, such as Ăpūlia, and Āpūlia, and Appŭlus, in Horace; Sīcănĭus and Sĭcānius, Sĭcŭlus and Sīcĕlĭdes, Sīdōnius and Sīdŏnĭus, Ĭtălus and Ītălus, in Virgil; to say nothing of innumerable instances in other writers. So that they seem in many cases to have reserved to themselves the power of making those vowels which are generally called doubtful, either long or short in the same word, as suited their purpose. Hence we have Bătăvi and Batāvi, Brĭtanni and Brītones, &c. &c.

These observations might be extended to a much greater length, but it is hoped enough has been said to show the difficulties of the subject, and obtain the indulgence of scholars.
